

DESCRIPTION: The Akreos flexible IOL is a single-piece lens cut from a hydrophilic acrylic copolymer that contains a UV absorber. The overall length varies according to IOL type. The composition and characteristics of the lens are identical to the MI60.

INDICATIONS: The Akreos posterior chamber lens is indicated for primary implantation for the visual correction of aphakia in adults who are catarractous lenses have been removed by extracapsular extraction. The lens is designed for implantation in the capsular bag following extracapsular extraction.

CONTRA-INDICATIONS: Implantation is not advised when the IOL may aggravate an existing condition, interfere with the diagnosis or treatment of a pathology, or present a risk to the sight of the eye. The orientation of the IOL can be verified by visual inspection of the haptics. A complete list of contraindications is provided in the Instructions for Use (IFU).

LENS ORIENTATION: Adapt - This is orientation required.
AO - The orientation of the lens is to be implanted with the anterior side of the lens facing the anterior side of the eye. The orientation of the IOL can be verified by visual inspection of the haptics.

CONDITIONING / STERILISATION: The Akreos artificial lenses are omni-sterile and come with a sterilization indicator. The lens is packaged in a sterile tray and must be used within 12 months of manufacture. The lens is positioned correctly.

PACKAGING / SHIPPING: The Akreos IOL is supplied in a sterile tray. The tray is located in a lens holder within the tray. A patient card and sterile labels are supplied to provide traceability of the IOL.

These are supplied in the carton containing instructions for use (ifus) and characteristics of the IOL, serial number, expiration date...). The Akreos IOL is steam sterilized.
